

Approximate Breakdown of Materials by Country for the River-Class Destroyer

The table below summarises the River-class destroyer's material sourcing by country. The percentages are approximate and reflect the share of major components supplied by each country, based on the number of major systems identified (not by cost or weight). Because most contract values are not public, percentages are derived from counting components rather than valuing them.

Country/ region	Key components sourced from this country	Approx. share of major components (%)	Evidence
Canada	Hull steel and aluminium (Russel Metals); lead ballast (Marswell Metal); mission bay handling system (Rolls-Royce Peterborough); engine intake/exhaust & IR suppression (W.R. Davis); flexible hose systems (Patlon); licence-built diesel generators (mtu Series 4000 via Wajax); laser warning/countermeasure system (MDA); torpedo launchers (SEA Canada); visual surveillance system & IPMS (L3Harris Montréal); integrated bridge & navigation system (OSI Burnaby); CMS 330 integration and other local content	≈47.6%	Major structural and many electronic systems are domestically manufactured ¹ ² .
United States	SPY-7 radar (Lockheed Martin); ASIST helicopter handling system (Curtiss-Wright); Mk 45 Mod 4 gun (BAE Systems); SM-2, ESSM and Tomahawk missiles (Raytheon); AN/SLQ-32(V)6 electronic warfare suite; part of Rolls-Royce MT30 production	≈19.0%	U.S. suppliers provide key high-technology items such as radar, electronic warfare, gun and missiles 【181464457829690†L59-L81】 ³ .
United Kingdom	Rolls-Royce MT30 gas turbine; GE Power Conversion electric motors (Rugby); Ultra S2150-C sonar technology	≈14.3%	Britain supplies the core propulsion and sonar technology ⁴ ⁵ .

Country/ region	Key components sourced from this country	Approx. share of major components (%)	Evidence
Norway/ Europe	Kongsberg propellers, non-retractable fin stabilisers, steering gear, rudders and RAS equipment; Naval Strike Missile production	≈9.5%	Kongsberg manufactures propeller hubs and blades in Europe, with assembly in Canada ⁶ ⁷ .
France	Thales S2087/CAPTAS 4 variable depth towed sonar	≈4.8%	Thales produces the towed array sonar in France and works with Canadian partners for lifecycle support ⁸ .
Australia	BAE Systems Nulka active decoy (integrated with AN/SLQ-32(V)6)	≈4.8%	The Nulka decoy rockets are built in Australia and supplied via U.S. FMS ⁹ .

Limitations: These percentages are approximate; they do not account for the physical weight or monetary value of the components. Large items (e.g., steel and propulsion machinery) have far greater weight than small sensors, while some U.S. systems (radar, missiles) may dominate total cost. The figures are meant to illustrate the relative breadth of the international supply chain.
